How to install Cazador

Lupillo Andazola

Cazador (Spanish for "hunter") sends you, every morning at 11:00 in your time zone, the 5 best jobs for you posted in the last 24 hours. Each pick comes with why it fits your background, your way in (connections, school alumni, hiring team), what to lead with, watch-outs and pay.

Cazador is free. Setup takes about 5 minutes, then your first picks arrive 5 to 10 minutes later. From then on, new picks come every morning at 11:00.

Before you start

- **A paid Claude plan** (Pro, Max, Team or Enterprise). Daily scheduled runs aren't available on the free plan.
- **The file `cazador-agent.zip`:** download it here. Keep it zipped.
- **Only if you want LinkedIn searched:** Google Chrome signed in to your LinkedIn account, and the Claude desktop app on your computer. Cazador can also search company career pages only, with neither of these.
- **Only if you want your picks by email too:** Gmail or Outlook connected in Claude (Settings → Connectors). Cazador emails the picks from your own account to your own address.

Good to know

One Cazador per CV. Cazador is built around one CV: your picks are matched to the profile Claude writes from it. To switch CVs later, attach the new one and tell Claude "Change my Cazador: use this CV". Your new profile replaces the old one. If you're

targeting two different tracks, set it up with the CV that covers both.

Which Claude model to use. Pick **Sonnet 5.5** from the model menu before you start the setup chat. It searches and ranks well, and it uses less of your plan's limits, which matters because each run reads dozens of job pages. Opus 5.5 ranks a little more sharply but uses your limits faster, especially on the Pro plan.

A word on LinkedIn. If you include LinkedIn, Cazador browses it in your own Chrome, signed in as you. LinkedIn's terms don't allow automated browsing, so there's a small risk LinkedIn asks you to verify your account or temporarily restricts it. Cazador keeps this low: it only reads job pages, never applies or messages anyone, and moves at a person's pace. To avoid the risk entirely, choose **company career pages only** during setup.

Step 1. Download the file

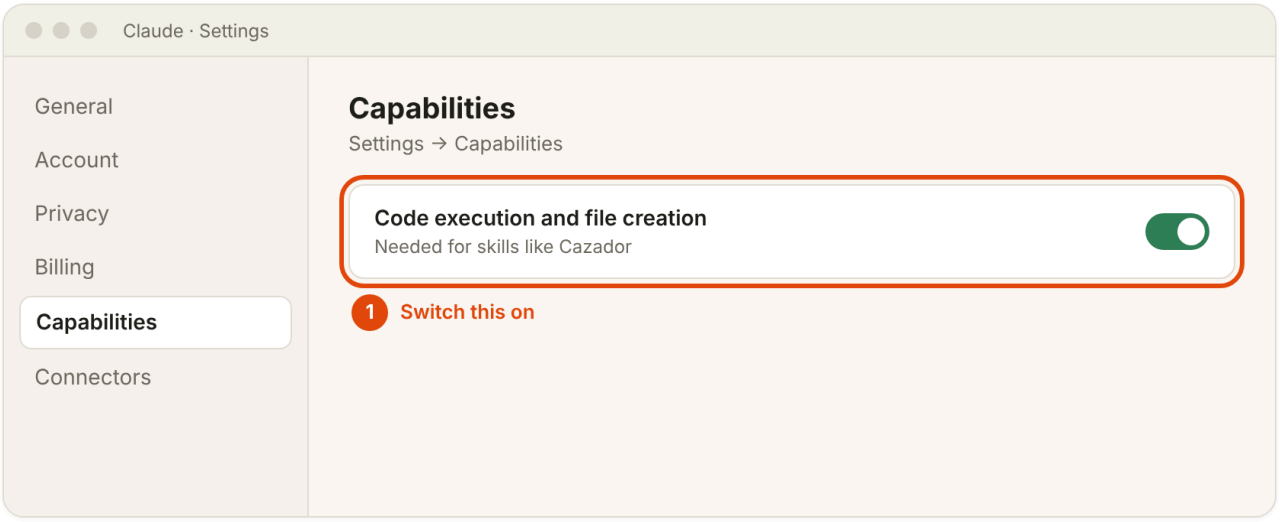

Download `cazador-agent.zip` and save it somewhere easy to find, like your Downloads folder. Don't unzip it: Claude needs the ZIP as it is.

If you're in the Google Drive folder, download the file `cazador-agent.zip` on its own, not the whole folder. Downloading the folder wraps everything in a second ZIP that Claude can't use.

On a Mac, Safari sometimes unzips downloads automatically. If you see a folder called **cazador** instead of the ZIP, right-click the folder and choose **Compress "cazador"**, then use the new `cazador.zip`.

Step 2. Turn on code execution

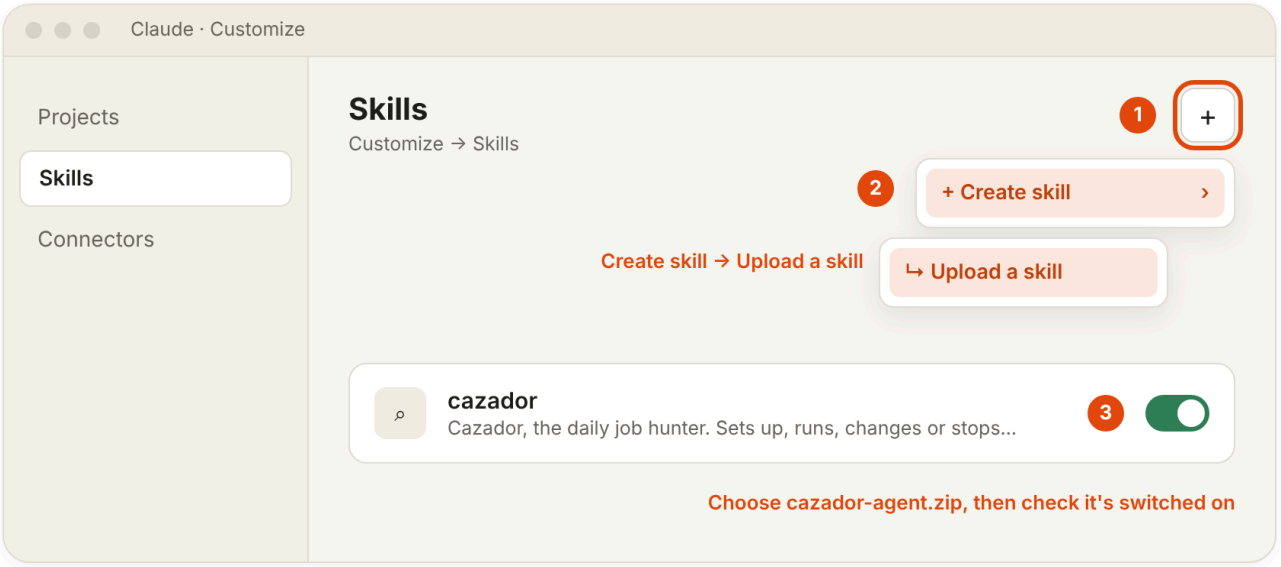

In Claude, open **Settings → Capabilities** and switch on **Code execution and file creation** (in the newer Settings layout it's called **Create and edit files**). Skills only work with it on. On a Team or Enterprise plan, your organization's owner may need to turn on skills first.

Simplified illustration. Your screen may look slightly different.

Step 3. Add Cazador to Claude

1. Go to **Customize → Skills**.
2. Click **+**, then **Create skill → Upload a skill**.
3. Choose `cazador-agent.zip`.
4. Check that **cazador** now appears in your list and is switched on.

Simplified illustration. Your screen may look slightly different.

Step 4. Only if you want LinkedIn searched

Skip this step if you'll choose company career pages only.

1. Install the **Claude desktop app** on your computer and sign in. Your daily LinkedIn search runs through it.

2. In Google Chrome, open the Claude extension in the Chrome Web Store and click **Add to Chrome**.
3. Sign in to the extension with your Claude account.
4. Pin it: click the puzzle-piece icon in Chrome's toolbar, then the pin next to Claude.
5. Make sure you're signed in to LinkedIn in that Chrome.

Read *A word on LinkedIn* above before you choose this option.

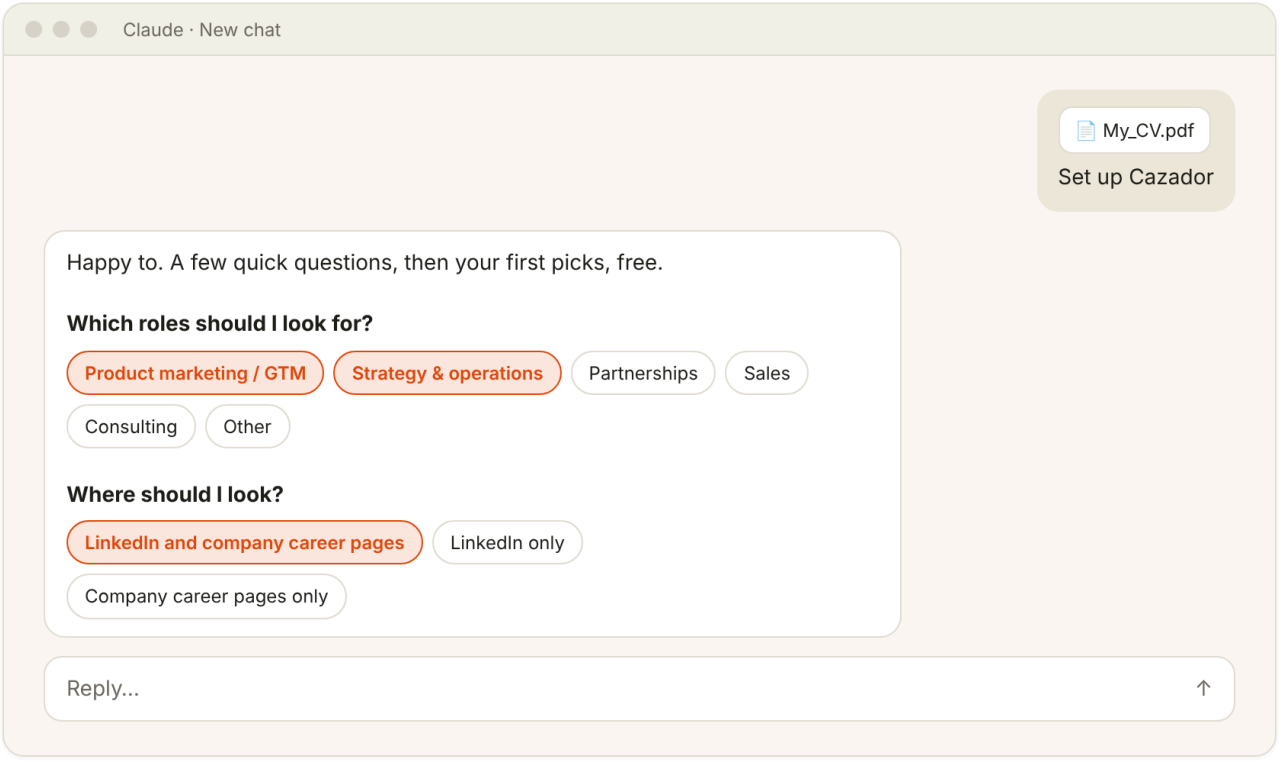

Step 5. Set it up with your CV

Start a new chat with **Sonnet 5.5** selected and attach your CV (PDF or Word). Type **Set up Cazador** and press **Enter**.

Claude asks two short rounds of questions, about 5 minutes in all:

- the roles you want, your cities (up to 5) and your seniority
- where to look: LinkedIn and company career pages, LinkedIn only, or company career pages only
- where you can work without a visa, your languages, and anything to exclude
- your time zone, the currency for pay, and whether you also want your picks by email

It then writes a short profile of you. Read it and correct anything that's off: the picks are only as good as this profile.

Simplified illustration of the setup chat.

Step 6. Get your first picks

Claude sets up your daily run at 11:00, then searches right away and shows today's 5 best jobs for you. Each comes with why it fits, your way in, what to lead with, watch-outs and pay. It takes 5 to 10 minutes; you can keep working meanwhile.

If you included company career pages, Claude first builds your company list: about 80 companies that hire your target roles in your cities and publish their jobs on Greenhouse, Lever or Ashby. It shows you the list before the first run so you can add or remove companies.

- **Career pages only check the companies on your list.** A job at a company that isn't on it won't show up from career pages.
- **LinkedIn, if you included it, searches all companies,** so it covers the ones missing from your list.
- **Companies that don't use Greenhouse, Lever or Ashby can't be added** to the list; LinkedIn is the way to cover them.
- **You can change the list anytime:** "Change my Cazador: add Spotify and Stripe" or "remove Deloitte".

Step 7. Every morning at 11:00

Your 5 picks arrive as a notification and in Claude, and by email if you chose that in setup.

- **With LinkedIn:** at 11:00 your computer needs to be on, with the Claude desktop app and Chrome open. If it's off or asleep then, that day's run is skipped: it doesn't run later on its own.
- **Company career pages only:** it runs in the cloud at 11:00, so it works even with your laptop closed.

Missed a run, or want fresh picks? Whatever the reason, type **run Cazador** in any Claude chat. Cazador runs right away with your usual settings and your picks arrive in 5 to 10 minutes. With LinkedIn, keep the Claude desktop app and Chrome open while it runs.

Running it more than once a day. "run Cazador" works any time, but each run looks at the last 24 hours and doesn't know what earlier runs sent you. So:

- **Before 11:00:** you'll get a second set of picks at 11:00 that mostly repeats the first.
- **After your 11:00 picks arrived:** a new run mostly repeats them. Only jobs posted since then are new.
- **Plan limits:** each run uses a good share of your Claude plan's usage.
- **LinkedIn:** each extra run is more automated browsing on your account, which slightly raises the chance LinkedIn asks you to verify it.

Best use: run it when you missed your 11:00 picks.

Changing it later

Just tell Claude, in any chat. For example:

- "Change my Cazador: add London."
- "Change my Cazador: only partnerships roles."
- "Change my Cazador to company career pages only."
- "Change my Cazador: also email me my picks."
- "Pause my Cazador."

It always runs at 11:00.

If something doesn't work

What you see	What to do
Claude doesn't seem to know Cazador	Check that cazador is switched on in Customize → Skills, then start a new chat.
"Turn on code execution"	Settings → Capabilities → switch on Code execution and file creation (or Create and edit files), then try again.
The upload is refused	Upload cazador-agent.zip itself: not an unzipped folder, and not a ZIP of the whole Drive folder (see Step 1).
No picks arrived at 11:00	With LinkedIn, your computer was probably off or asleep at 11:00, so that day's run was skipped. Type "run Cazador" in Claude to get the picks now.
"Your Cazador license isn't active"	You're on an older paid version. Type "unlock Cazador" in Claude: it's free now, and Claude updates your daily run.
Claude says scheduled tasks aren't available	Daily runs need a paid Claude plan.
